### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

1. Claim 1 has been amended as follows:

1. (Currently amended) A deposition system which supplies a source gas and a purge gas alternately for deposition, comprising:

- a deposition chamber;

- a substrate holding unit which holds a substrate in the deposition chamber;

- a source gas supply unit which supplies the source gas to the deposition chamber;

- a reactive gas supply unit which supplies a reactive gas to the deposition chamber;

- a purge gas supply unit which supplies the purge gas to the deposition chamber;

- an exhaust unit which exhausts the source gas, the reactive gas, and the purge gas from the deposition chamber;

- a first heating unit which heats the substrate arranged in the deposition chamber to maintain the same to a predetermined temperature;

- a second heating unit which heats the substrate arranged in the deposition chamber rapidly;

- an annealing gas introducing unit which introduces an annealing gas into the deposition chamber; and

a partition plate positioned lower than an inlet of the annealing gas introducing unit and higher than inlets of the reactive gas supply unit, the source gas supply unit, and the purge gas supply unit, the partition plate having a single center opening;

wherein the first heating unit is a heater formed on a substrate holding surface of the substrate holding unit; ,

Deleted: and

the substrate holding unit has a moving mechanism which moves the substrate in position so that the distance between the substrate and the second heating unit can be adjusted by an operation from outside the deposition chamber without opening the deposition chamber, and

the substrate holding unit and the partition plate are structured such that the substrate holding unit contacts the partition plate when the substrate holding unit is in a raised position; and

the substrate holding unit and the partition plate are structured such that the substrate is accessible to the annealing gas through the center opening in the partition plate when the substrate holding unit is in the raised position.

Authorization for this examiner's amendment was given in a telephone interview with Daniel Lent on 02/04/2008.

2. The following is an examiner's statement of reasons for allowance:

Moore et al. (US 5683518) teaches a multiple gas supply units (#314a-b and more) at various height; but fails to teach a partition plate having a center opening to contact the substrate holding unit in a raised position; and to have a gas introducing unit above the partition plate and three gas introducing units below the partition plate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Keath T. Chen whose telephone number is 571-270-1870. The examiner can normally be reached on M-F, 8:30-5:00 EST.
